Greenhouse Gas Assertion

Global warming is causing climate change. Many places have seen changes in rainfall, resulting in more floods, droughts, or intense rain, as well as more frequent and severe heat waves. The buildup of greenhouse gases can change Earth's climate and result in dangerous effects to human health and welfare and to ecosystems, as well as causing a considerable impact on business operations.

On the concept of “Doing good for the Earth, doing good for people”, we promise not only to comply with the government’s greenhouse gas management policies, but also to track new developments in global environmental sustainable development issues. We sincerely commit ourselves to carry out greenhouse gas inventories and product carbon footprint inventories in order to take control greenhouse gas emissions. Furthermore, we will plan and implement greenhouse gas reduction actions in accordance with the result of inventories.

With our green products and our commitments to the corporate social responsibility, we look forward to grasping the long-term commercial competitive advantage, as well as to being a green and sustainable enterprise.
